DETAILED ACTION

Allowable Subject Matter

1. Claims 1-18 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. Leonard (US 4,220,535) discloses a device (100) capable of exchanging moisture between at least two counter-current gas flows comprising a chamber (112) having an inlet (133) and an outlet (135) for a first gas flow, such that the first gas flow flows in a first direction from the inlet to the outlet inside the chamber, and at least one duct (hollow fibers 118) which extends inside the chamber, at least in a direction substantially parallel with the first direction, which duct is arranged to conduct a second fluid flow in an opposite direction to the first direction, which duct comprises a duct wall material with high permeability to water, and comprising an inlet space for the first gas flow, which inlet space is arranged in the chamber between the inlet opening and a first support and flow distributing member (124a) arranged inside the chamber between the inlet opening and the outlet opening, and having an extension in a plane which is non-parallel to the first direction, such that it extends essentially over the entire area of the plane inside the chamber (except for the lower portion), wherein the support and flow distributing member comprises a plurality of duct openings through which the at least

one duct extends in Fig. 2 and col. 1, line 20 to col. 15, line 12. The reference also discloses a second embodiment wherein the support and flow distributing member (24) extends over the entire area of the plane inside the chamber and comprises a plurality of duct openings through which the at least one duct extends and a set of flow distributing openings arranged around the periphery in Fig. 1 and col. 9, lines 57-62).

The prior art made of record does not teach or fairly suggest the device of claim 1 comprising means for uniform distribution of the first gas inside the inlet space for providing substantially uniform and parallel uniform first fluid flow inside the chamber. In particular, it is noted that the first and second embodiments of Leonard do not provide substantially uniform and parallel first fluid flow since the first fluid flow is serpentine (the first embodiment of Fig. 2) or directed along the periphery of the chamber (the second embodiment of Fig. 1).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Grangeon et al., Rubas, Gollan, Kalthod et al., Prasad et al. and Garrett et al. references disclose similar devices.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jason M. Greene whose telephone number is (571) 272-1157. The examiner can normally be reached on Monday - Friday (9:00 AM to 5:30 PM).
